

# Bicycles & Pods

## Public transport with pod vehicles meets mobility needs

As part of the traffic turnaround, bicycle traffic will be strongly promoted. Public transport can support this issue. There are many reasons to take bicycles with you on public transport: on steep inclines, when the bike breaks down and when it rains, to name just a few. Therefore, also cabin vehicles should offer space in the form of a sufficiently dimensioned multi-purpose area.

\*\*\*

For example, if a mother or father and their child want to take the sky-pod (instead of a car) to go to another part of the city or the countryside to go on a bike ride, it should be possible for them, to travel together in a cabin, and then be able to take their bicycles with them. Such a need for mobility should always be taken into account.

**Just get in!**

\*\*\*

The multi-purpose area is therefore larger than it is only needed for getting in and out. It also offers space for standing room. Normally every passenger has a seat, but the additional standing room is used during rush hour, in the traffic around festivals and sporting events. You should always expect these passengers!

## Vehicle height

If you travel with your family, friends or colleagues, you will likely accept a small and low interior space of the vehicle. The size of a car, for example, might be right. However, when you go into a public space, a public vehicle, you prefer a large interior space - for personal space, for distance, for thoughts, for some against fear, for air.... The interior height of the vehicle should therefore be reasonable.
